

Principal Enterprise Architect | Enterprise Transformation & Technology Strategy | Business, Application, Data, AI & Cloud Architecture | GenAI & Agentic AI | Architecture Governance | TOGAF | ArchiMate | OrbusInfinity | Executive Technology Leadership | Banking Experience |15+Years

PROFESSIONAL SUMMARY

Principal Enterprise Architect and Enterprise Transformation Leader with 15+ years of experience spanning Enterprise Architecture, Solution Architecture, Cloud Transformation, AI, Data Architecture, Platform Engineering and large-scale digital modernization across Banking, Financial Services, Aviation and enterprise environments.

Proven expertise in translating business strategy into enterprise architecture, defining current-state, target-state and transition architectures, conducting architecture assessments and developing strategic technology and transformation roadmaps aligned with business priorities, regulatory requirements and long-term organizational objectives.

Strong experience across Business, Application, Data, Integration, Technology, Cloud, Security and AI Architecture, providing end-to-end architectural leadership across complex enterprise transformation programs. Experienced in defining architecture principles, reference architectures, technology standards, reusable patterns and governance frameworks while influencing architecture decisions across multiple programs and delivery teams.

Experienced in Architecture Governance and Architecture Review Boards (ARB), providing architecture assurance, strategic technology guidance, Architecture Decision Records (ADRs), risk management and standards compliance across enterprise technology portfolios. Strong knowledge of TOGAF-based Enterprise Architecture practices, with experience connecting business objectives, technology strategy and implementation roadmaps.

Deep expertise in Enterprise AI Architecture, including Generative AI, Agentic AI, LLMs, RAG, AI copilots, intelligent automation, Multi-Agent Systems, MLOps, AI Model Lifecycle Management, Responsible AI, AI Governance and Model Risk Management. Experienced in defining enterprise AI platforms and governance frameworks that enable secure, scalable and responsible AI adoption.

Extensive experience defining secure, scalable and resilient AWS, Azure, hybrid-cloud and multi-cloud architectures, including cloud operating models, landing zones, Kubernetes/OpenShift platforms, Infrastructure as Code, DevSecOps, Platform Engineering, observability, operational resilience and FinOps.

Trusted technology advisor with strong executive stakeholder management and architecture leadership capabilities, able to communicate complex architecture strategies to business executives, technology leadership, architects and engineering teams and drive consensus around strategic technology decisions.

Focused on delivering measurable enterprise outcomes through technology modernization, application and platform simplification, cloud optimization, AI-driven transformation, improved operational resilience, architecture standardization, cost optimization and reduced technology risk.

KEY HIGHLIGHTS

- 15+ years of technology experience spanning Enterprise Architecture, Solution Architecture, Cloud Transformation, Platform Engineering and Digital Modernization across Banking, Financial Services, Aviation and enterprise environments.
- Proven expertise in defining Enterprise Target-State Architectures, Technology Roadmaps, Architecture Principles, Reference Architectures and Governance Frameworks aligned with strategic business objectives.
- Strong cross-domain architecture expertise across Application, Data, Integration, Technology, Cloud, Security and AI Architecture, enabling end-to-end enterprise transformation.
- Experienced in translating business and technology objectives into architecture strategies, target-state platforms, modernization initiatives and actionable transformation roadmaps.
- Strong Architecture Governance experience, including Architecture Review Board (ARB), architecture assurance, technology standards, Architecture Decision Records (ADRs), reusable patterns and strategic technology decision-making.
- Proven ability to influence architecture decisions across multiple business units, programs and delivery teams while collaborating with executive stakeholders, architects, security teams and engineering leadership.
- Extensive expertise in Enterprise AI Architecture, including Generative AI, Agentic AI, LLMs, RAG, AI Copilots, Multi-Agent Systems, intelligent automation and enterprise AI platforms.
- Strong experience establishing AI Governance, Responsible AI, Model Risk Management and AI Model Lifecycle Management covering model validation, deployment, monitoring, drift detection, retraining, retirement and auditability.
- Strong Enterprise Data Architecture expertise covering AI-ready data platforms, Data Governance, Metadata Management, Data Lineage, Data Integration, Lakehouse Architecture, Data Mesh principles, analytics and enterprise information management.
- Extensive experience defining secure, scalable and resilient AWS, Microsoft Azure, Hybrid-Cloud and Multi-Cloud architectures supporting enterprise modernization and mission-critical workloads.
- Deep expertise in Platform Engineering and Cloud-Native Architecture, including Kubernetes, OpenShift, Terraform, Infrastructure as Code, GitOps, DevSecOps, CI/CD and enterprise automation.
- Proven experience establishing Cloud Centers of Excellence (CCoE), cloud governance models, architecture standards and cloud operating models supporting enterprise-scale cloud adoption.
- Strong knowledge of Security-by-Design, Zero Trust Architecture, IAM, OAuth2/OIDC, TLS, PKI, encryption, data protection and enterprise

security governance.

- Extensive experience operating within highly regulated banking environments, aligning technology architectures with security, risk, compliance and operational-resilience requirements.
- Proven experience evaluating emerging technologies, AI platforms, cloud services and enterprise tools based on business value, scalability, security, governance and operational requirements.
- Strong experience defining enterprise modernization strategies for legacy applications, cloud-native platforms, microservices, APIs and event-driven architectures.
- Demonstrated measurable transformation outcomes, including 40% improvement in platform scalability, 25% cloud infrastructure cost reduction and 99.99% availability for mission-critical banking platforms.
- Delivered AI-driven business outcomes, including an enterprise RAG platform reducing knowledge-retrieval time by 80%, AI assistants improving employee productivity by 35%, and Agentic AI automation reducing manual support effort by 50%.
- Successfully influenced architecture decisions across 15+ delivery teams and drove adoption of enterprise technology standards across multiple business domains.
- Strong background in FinOps, observability, SRE, operational resilience, disaster recovery and business continuity, supporting cost-efficient and highly available enterprise platforms.
- Experienced in technology strategy, strategic planning, portfolio management, vendor management, budget planning and cost optimization within enterprise transformation environments.
- Strong executive stakeholder management and technology leadership capabilities, communicating architecture strategy, technology decisions, risks and transformation priorities across business and technology stakeholders.
- TOGAF-certified Enterprise Architect with extensive cloud, AI, security, Kubernetes, Terraform and architecture knowledge supporting enterprise transformation and technology modernization.
- Combines strategic Enterprise Architecture leadership with deep hands-on engineering experience, enabling effective communication from executive strategy and architecture governance through solution design and engineering execution.

IT SKILLS

Major Skill Area	Key Skills / Keywords
Enterprise Architecture & Strategy	EA Strategy, Architecture Vision, Baseline, Target-State & Transition Architecture, Architecture Principles, Reference Architecture
Business Architecture	Business Capability Mapping, Capability Assessment, Capability Heatmaps, Value Streams, Operating Models, Business/IT Alignment
Enterprise Transformation Architecture	Transformation Strategy, Digital Transformation, Current-State Assessment, Gap Analysis, Target Operating Model, Transformation Roadmaps
Architecture Governance	Architecture Review Board (ARB), Architecture Assurance, ADRs, Architecture Standards, Exceptions, Risk Management, Design Authority
TOGAF, ArchiMate & EA Tools	TOGAF ADM, ArchiMate, Architecture Views/Viewpoints, Architecture Repository, OrbusInfinity, Architecture Traceability
Application Portfolio & Rationalization	Application Portfolio Management, TIME Model, Business Value/Technical Health Assessment, Modernize, Consolidate, Replace, Retire, Technical Debt
Application & Solution Architecture	Application Architecture, Microservices, Cloud-Native Architecture, Distributed Systems, Domain-Driven Design, Reusable Architecture Patterns
Enterprise Integration Architecture	API-First, Event-Driven Architecture, API Management/Governance, Kafka, Event Streaming, REST, GraphQL, Enterprise Integration Patterns
Enterprise Data Architecture & Governance	Data Strategy, Data Domains, Data Governance, Data Quality, Lineage, Metadata, MDM, Data Products, Enterprise Information Management
Modern Data Platforms	Lakehouse, Data Mesh, Data Fabric, Data Lakes, Real-Time Processing, Streaming, Databricks, Snowflake, Analytics Platforms
Enterprise AI Strategy & Architecture	Enterprise AI Strategy, AI Transformation, AI Operating Model, AI Platform Architecture, AI CoE, AI Factory, Intelligent Automation
GenAI, RAG & Agentic AI	GenAI, LLM Architecture, Enterprise RAG, Vector Search, AI Agents, Multi-Agent Systems, Agent Orchestration, Agentic RAG, LangGraph, CrewAI
AI Governance, Responsible AI & MLOps	Responsible AI, Model Risk Management, AI Guardrails, Explainable AI, Model Lifecycle, MLOps, LLMOps, Model Monitoring, AI Security
Enterprise Cloud Architecture	AWS, Azure, GCP, Hybrid Cloud, Multi-Cloud, Landing Zones, Cloud Transformation, Migration, Cloud Operating Models
Platform Engineering, DevSecOps & IaC	Kubernetes, OpenShift, Internal Developer Platforms, Terraform, IaC, GitOps, CI/CD, DevSecOps, Policy-as-Code
Enterprise Security & Zero Trust Architecture	Security-by-Design, Zero Trust, IAM, OAuth2/OIDC, SSO, RBAC, PKI, Encryption, Data Protection, Threat Modeling
Risk, Compliance & Operational Resilience	Enterprise Risk, ISO 27001, NIST, PCI-DSS, Banking Compliance, BCBS 239, Basel III, HA, DR, BCP, Operational Resilience
Technology Strategy & Modernization	Technology Strategy, Technology Roadmaps, Technology Radar, Technology Rationalization, Lifecycle Management, Emerging Technology Evaluation
FinOps, Investment & Portfolio Management	TCO, FinOps, Cost Optimization, Budget Planning, Investment Prioritization, Vendor Management, RFI/RFP, Build-vs-Buy, Portfolio Management
Executive & Architecture Leadership	CIO/CTO Advisory, Executive Stakeholder Management, Strategic Advisory, Architecture Leadership, Executive Communication, Architecture Storytelling, Transformation Governance

EXPERIENCE

Enterprise Architect – AI, Data & Cloud Transformation

- Define enterprise-wide target-state architecture across business applications, cloud, data, AI, integration, security and digital banking platforms.
- Lead enterprise architecture strategy and translate organizational business strategy into actionable business, application, data, AI, integration, security and technology architectures.
- Define and maintain current-state, transition-state and target-state enterprise architectures, ensuring alignment with business priorities, regulatory requirements and long-term transformation objectives.
- Develop 5 year enterprise technology and transformation roadmaps, identifying strategic initiatives, dependencies, modernization priorities, investment requirements and measurable business outcomes.
- Partner with CIO, CTO, CISO, business executives, transformation leaders and senior stakeholders to advise on technology strategy, architecture investments, modernization priorities, emerging technologies and enterprise risk.
- Establish and govern Enterprise Architecture principles, standards, reference architectures, reusable patterns, technology policies and Architecture Decision Records (ADRs) across the organization.
- Lead or chair the Architecture Review Board (ARB) and provide architecture assurance for strategic programs, ensuring alignment with enterprise standards for scalability, security, interoperability, resilience, data governance and regulatory compliance.
- Develop Business Capability Maps, Value Streams and Operating Model views to connect strategic business objectives with applications, information, technology platforms and transformation initiatives.
- Lead business capability maturity and gap assessments to identify transformation opportunities, technology constraints and strategic investment priorities.
- Define recommendations to Invest, Modernize, Migrate, Consolidate, Replace or Retire applications and platforms, reducing technology debt, duplication, operational complexity and cost.
- Establish traceability across Business Strategy → Business Capabilities → Value Streams → Applications → Data → Technology → Transformation Initiatives → Business Outcomes.
- Define enterprise Cloud and Platform Strategy across AWS, Azure, hybrid and multi-cloud environments, including landing zones, IAM, networking, security guardrails, observability, FinOps, resilience and cloud operating models.
- Drive cloud modernization and platform engineering strategy, enabling reusable enterprise platforms, Infrastructure as Code, DevSecOps, Kubernetes, GitOps and Internal Developer Platforms.
- Define Enterprise AI Strategy and Target Architecture supporting Generative AI, Agentic AI, RAG, enterprise copilots, AI agents, intelligent automation and enterprise knowledge platforms.
- Establish AI governance and Responsible AI frameworks covering model risk, security, privacy, explainability, human oversight, regulatory compliance, model lifecycle management and AI observability.
- Establish API-first, event-driven and enterprise integration architecture, defining interoperability standards, API governance, messaging patterns and reusable integration services.
- Embed Security-by-Design and Zero Trust principles into enterprise architecture covering IAM, encryption, PKI, data protection, security controls, threat considerations and regulatory compliance.
- Own technology lifecycle and technology rationalization, identifying obsolete, duplicated, unsupported and high-risk technologies and defining modernization or retirement roadmaps.
- Maintain an enterprise Technology Radar covering Adopt, Trial, Assess and Hold decisions for strategic and emerging technologies.
- Evaluate strategic technology products, cloud platforms, AI platforms and vendors through RFI/RFP, architecture assessments, PoCs and technology selection frameworks.
- Collaborate with Finance, Procurement and technology leadership on technology investment planning, TCO, FinOps, licensing optimization and vendor strategy.
- Establish and monitor architecture KPIs and transformation metrics covering modernization progress, cloud adoption, technical debt, application rationalization, cost optimization, resilience, security and architecture compliance.
- Identify and manage enterprise architecture risks, technical debt, architecture exceptions and strategic dependencies, escalating material risks to technology leadership.
- Provide architecture leadership across large-scale transformation programs and ensure consistency between Enterprise Architecture, Solution Architecture, Security Architecture, Data Architecture and Engineering.
- Mentor Enterprise Architects, Solution Architects, Cloud Architects and engineering teams and establish architecture communities of practice to improve organizational architecture maturity.
- Present complex architecture strategies and transformation recommendations through executive-level architecture views, heatmaps, roadmaps, dashboards and decision papers.
- Use TOGAF, ArchiMate and enterprise architecture repositories such as OrbusInfinity to maintain architecture traceability across business, application, data and technology domains.

HCL Technologies Ltd. | Chennai | Nov 2020 - Aug 2024

Enterprise Cloud & Solution Architect

- Defined enterprise cloud architecture blueprints, target-state architectures and transformation roadmaps supporting large-scale modernization programs.
- Translate strategic business and technology objectives into architecture principles, reference architectures, transformation initiatives and technology roadmaps.
- Lead Architecture Review Board (ARB) activities and provide architecture assurance across strategic banking programs and multiple technology domains.
- Establish architecture governance covering architecture standards, reusable patterns, Architecture Decision Records (ADRs), technology decisions and architecture exceptions.
- Develop enterprise technology roadmaps supporting modernization, innovation, operational resilience and strategic platform evolution.
- Influence architecture decisions across 15+ delivery teams, business units and technology stakeholder groups without requiring direct delivery ownership.
- Architect enterprise AI platforms supporting Generative AI, Agentic AI, LLMs, RAG, enterprise knowledge retrieval, AI copilots and intelligent automation.

- Define enterprise AI Model Lifecycle Management covering model onboarding, validation, approval, deployment, monitoring, drift detection, retraining, retirement and auditability.
- Establish AI governance covering Responsible AI, model risk management, security, regulatory compliance and governance controls.
- Define enterprise Data Architecture covering AI-ready data platforms, metadata management, lineage, data governance, data integration and enterprise information management.
- Architect hybrid and multi-cloud platforms across AWS and Microsoft Azure, ensuring security, scalability, resilience and regulatory alignment.
- Led architecture across AWS, Azure, hybrid-cloud and multi-cloud environments.
- Established a Cloud Center of Excellence (CCoE) governance model supporting standardized enterprise cloud adoption.
- Defined cloud architecture principles, standards, reusable patterns and governance controls.
- Conducted architecture reviews to ensure solutions complied with enterprise security, resilience, scalability and operational standards.
- Designed AI-ready cloud platforms capable of supporting future GenAI, analytics and AI/ML workloads.
- Defined enterprise Data Architecture strategy covering data governance, metadata management, lineage, regulatory reporting and AI-ready data platforms.
- Established data governance practices supporting improved data quality, consistency and traceability.
- Designed Lakehouse architecture supporting unified analytics and AI workloads.
- Evaluated Data Mesh principles for decentralized ownership of enterprise data domains.
- Defined enterprise platform engineering architecture using Kubernetes, cloud-native technologies and Infrastructure as Code.
- Established DevSecOps operating models and CI/CD transformation strategies.
- Designed observability, SRE, monitoring and operational-resilience frameworks.
- Led Terraform-based infrastructure automation and reusable cloud architecture patterns.
- Collaborated with executive and senior technology stakeholders on cloud strategy, modernization priorities and technology roadmaps.
- Mentored architects and engineering teams on enterprise cloud and architecture practices.
- Established an enterprise Cloud Center of Excellence supporting large-scale cloud adoption.
- Reduced infrastructure provisioning effort by 60% through Infrastructure as Code.
- Improved application performance by 40%.
- Reduced deployment failures by 50% through DevSecOps automation.
- Delivered strategic multi-cloud transformation programs.
- Improved governance and compliance through standardized cloud operating models.
- Accelerated cloud modernization across multiple enterprise business units

Emirates Group | Dubai, UAE | Jul 2018 - Apr 2020
Senior Software Engineer – Solution & Cloud Architecture

- Contributed to the architecture and modernization of enterprise aviation platforms supporting airline operations, passenger services, digital channels and global business functions.
- Supported current-state assessments and target-state solution architecture for modernization of legacy aviation applications and services.
- Designed scalable cloud-native and containerized architecture patterns for enterprise airline applications, improving scalability, resilience and deployment consistency.
- Supported architecture across passenger-facing digital platforms, operational systems and enterprise integration services within the aviation ecosystem.
- Designed API-first and service-oriented integration patterns to enable secure interoperability between airline applications, enterprise platforms and external partner systems.
- Contributed to event-driven architecture for asynchronous processing and integration across distributed aviation systems.
- Defined reusable solution architecture patterns, technology standards and cloud adoption guidelines for application and engineering teams.
- Supported modernization of legacy applications toward microservices, APIs, containers and cloud-native architectures.
- Designed high-availability, fault-tolerant and disaster-recovery architectures for business-critical airline platforms supporting 24x7 global operations.
- Defined resilience patterns covering active-active/active-passive deployments, failover, recovery, scalability and operational continuity.
- Collaborated with cybersecurity teams to incorporate IAM, authentication/authorization, encryption, API security, secrets management and security-by-design principles into solution architectures.
- Implemented enterprise observability and monitoring practices covering application health, infrastructure performance, logs, metrics, alerts and operational diagnostics.
- Supported performance engineering and capacity planning for applications handling high-volume airline transactions and global user traffic.
- Worked with application, infrastructure, security, integration and operations teams to resolve cross-domain architecture dependencies and technical risks.
- Participated in architecture and solution-design reviews, ensuring proposed solutions aligned with enterprise standards, security requirements and operational objectives.
- Guided engineering teams on cloud-native development, distributed systems, microservices, APIs, containerization and modern software engineering practices.
- Supported architecture for enterprise data and integration flows between operational applications, digital channels and downstream enterprise systems.
- Collaborated with business and technology stakeholders to translate aviation operational requirements into scalable technical solutions and architecture designs.
- Contributed to architecture documentation including HLDs, integration diagrams, deployment views, architecture decisions, security considerations and operational models.
- Improved application scalability through adoption of cloud-native and containerized architecture patterns.
- Improved platform resilience through high-availability and disaster-recovery architecture.
- Reduced operational downtime through improved monitoring, automation and resilience practices.
- Improved deployment consistency through reusable Infrastructure as Code and CI/CD automation.

- Established reusable cloud and solution architecture patterns across engineering teams.
- Supported modernization of business-critical platforms serving global aviation operations.

Capgemini | Chennai | Jan 2017 - Jul 2018

Lead Consultant – Enterprise Cloud & Solution Architecture

- Led cloud architecture initiatives supporting enterprise BFSI transformation programs.
- Defined cloud transformation roadmaps and modernization strategies aligned with client technology objectives.
- Designed hybrid-cloud and multi-cloud architectures for enterprise workloads.
- Established cloud architecture governance, security and compliance frameworks.
- Developed enterprise reference architectures, standards and reusable architecture patterns.
- Conducted current-state architecture assessments and cloud migration planning.
- Identified modernization requirements, architecture gaps, dependencies and migration risks.
- Led Kubernetes and cloud platform engineering architecture initiatives.
- Defined DevSecOps operating models and infrastructure automation strategies.
- Designed disaster recovery, high-availability and business-continuity architectures.
- Led architecture governance reviews and technology-design assessments.
- Collaborated with senior client stakeholders on technology strategy and modernization planning.
- Guided application teams through cloud adoption and architecture modernization.
- Supported technology standardization across client environments.
- Delivered enterprise cloud modernization initiatives for BFSI clients.
- Reduced cloud operational costs by 30%.
- Accelerated software delivery through DevSecOps transformation.
- Improved disaster-recovery readiness and operational resilience.
- Established reusable enterprise architecture standards.
- Enhanced security posture through Zero Trust implementation.
- Delivered multi-cloud transformation programs.

Tech Mahindra Ltd. | Hyderabad | Oct 2015 - Dec 2016

Project Lead – Application & Cloud Architecture

- Led cloud modernization and digital-transformation initiatives for enterprise applications.
- Designed cloud-native and microservices-based application architectures.
- Supported modernization of legacy applications into scalable cloud-native platforms.
- Established cloud governance and security standards.
- Implemented Terraform-based Infrastructure as Code frameworks.
- Led Kubernetes platform deployment initiatives.
- Defined enterprise monitoring, observability and operational-support practices.
- Implemented CI/CD and DevSecOps delivery models.
- Conducted cloud migration assessments and migration planning.
- Designed highly available enterprise application architectures.
- Participated in architecture reviews and governance activities.
- Collaborated across infrastructure, application and security teams.
- Mentored engineering teams on modern architecture and cloud-native engineering practices.
- Modernized legacy applications into cloud-native architectures.
- Reduced infrastructure provisioning effort by 50%.
- Improved deployment efficiency through automation.
- Increased scalability through microservices adoption.
- Improved enterprise security posture.
- Improved reliability through observability platforms.
- Delivered scalable solutions supporting high-volume transaction processing.
- Delivered enterprise insurance application capabilities using Java/J2EE and enterprise web technologies.
- Designed application components supporting policy-management workflows.
- Developed database and integration components using Oracle and Java enterprise technologies.
- Supported end-to-end application development, testing and deployment.
- Improved application workflows and maintainability through structured enterprise application design.

EARLIER EXPERIENCE

ASSOCIATE CONSULTANT

Polaris Financial Technology Ltd. | Chennai | Nov 2013 - Sep 2015

SR. ASSOCIATE CONSULTANT

UST Global | Kerala | Jun 2010 - Nov 2013

KEY PROJECTS & ACHIEVEMENTS

- **Automation Platform, Nissan (Japan/US) | Oct 2015 – Mar 2016:**
Developed Java/J2EE-based automation solutions using Spring, Servlets/JSP, Talend, Tomcat, and Eclipse; streamlined data

processing and integration for global operations.

- **MSSB Forms Gallery, Morgan Stanley Smith Barney (US) | Feb 2015 – Sep 2015:** Built responsive web forms portal with Core Java, Spring Boot, AngularJS, Microservices, Web Services, jQuery, Git, HTML/CSS; enhanced user experience and deployment efficiency.
- **Global Trade Repository – FX, Depository Trust & Clearing Corporation (New York) | Nov 2013 – Feb 2015:** Engineered FPML-compliant trade repository using Core Java/J2EE, Spring/Struts, JMS/EJB, AngularJS 7, Oracle, Unix, Microservices; ensured regulatory compliance and real-time FX processing.
- **Core Banking System, Dresdner Bank | Apr 2012 – Nov 2013:** Designed and implemented scalable banking platform with Java/J2EE, Spring/Hibernate, Web Services, WebSphere/Tomcat, AngularJS 7, Oracle, SVN; integrated microservices for robust transaction handling.
- **Insurance Application, Standard Life:** Delivered full-stack insurance solution using Java/J2EE, Struts/Hibernate/EJB, JSF/Servlets/JSP, Oracle, Tomcat/Eclipse, XML, JavaScript/HTML/CSS; optimized workflows for policy management.

EDUCATION

Master of Computer Applications (MCA) Andhra University, India 2010

CERTIFICATIONS

- AWS Certified Solutions Architect –Professional
- AWS Certified DevOps Engineer –Professional
- AWS Certified Security – Specialty
- AWS Certified Solutions Architect –Associate
- AWS Certified Developer – Associate
- AWS Certified SysOps Administrator –Associate
